

Amphenol Broadband Solutions offer a six position power strip designed to satisfy the needs of an end-user installation.

The built-in circuit breaker opens the circuit to remove power from the six outlets in the event of excessive current flow.

In case of overload, the unit is equipped with a circuit breaker designed to safely shut off all 6 power outlets. To clear the condition, simply eliminate the overload and then reset by pressing the red circuit breaker / on-off switch.

The 6-outlet power strip has built-in screw head slot(s) for convenient installation under shelf, cabinet, or to a wall.

Power Strip
