

Innovative Self Install Solutions

Broadband service providers, forward and reverse logistics companies and CPE refurbishment vendors depend on high quality kit components to match with the modems and DVRs they deploy. Simple installation and reliable performance must be provided by each of these parts in order to avoid the faults and errors that could lead to dissatisfied customers.

Amphenol Broadband Solutions (ABS) has been providing reliable, high quality broadband products to service providers and OEM companies worldwide for decades.

These products are used throughout their infrastructure every day. ABS Self Install Kits extend that same simplicity, high quality and reliability into the subscriber's home.

Broadband Components for the CATV Market

Kits are available with a variety of components and package types. For example a service provider can choose from HDMI cables, as well as short or long coaxial jumpers that may be optionally equipped with easy-on torque nuts. Other hardware, such as coaxial splitters, fiber optic jumpers, and data or A/V cables, along with mounting hardware may also be added to a kit.

Many kits and components are used for:

- Field Service Technicians for on-site repairs or installations – no missing parts!
- Pre-packaged staging kits for refurbished CPE equipment
- Self-install kits to logistics and packaging companies for end-user customers
